Professional Summary

Aspiring full-stack developer proficient in MERN stack, Hono.js, and cloud-native solutions, with expertise in scalable web applications and efficient backend systems using Django and TypeScript. Seeking to deliver impactful software solutions for high-growth organizations.

Skills

- Programming & Frameworks: MERN stack, Hono.js, TypeScript, Python, Django Rest Framework
- Cloud & Tools: AWS, Docker, Firebase, Supabase
- Database Management: SQL, Prisma
- Other Technologies: Ionic, Angular

Projects

1. Hospital Management System

- Utilized Django for backend development and Firebase for authentication and database management.
- Features include patient management, appointment scheduling, email confirmations, and a blog.
- [GitHub Repository](#)

2. Blog Website

- Developed a scalable blog application using React, Hono.js, and Cloudflare Workers for high availability and performance.
- Integrated Supabase as a robust database backend with Prisma for ORM functionalities.
- Delivered a responsive UI with user authentication and seamless CRUD operations.
